Note One advantage of Premiere is that you don't have to deal with disk structure. All the files for a project are together, so you can keep working on the project in one folder, copy the project folder to a different location, and use it there. You can even move projects from one computer to another. Figure 12-3. See the four panels at the top of this project window? That's the editor's way of showing you everything that's included in a new project. You have a folder for source material, a folder for the project's deliverable, and a folder with your edit commands and settings. The project's elements are displayed in the Projects panel. Along the left are the titles you assign to projects (In Premiere Pro they appear as a grid of thumbnails), a new project is opened (page 2). It's typically a folder that includes all the files used to make a project: such as a folder for source material and a folder for the project's final deliverable, such as an MPEG file. In this project, you have three main files: a video source file, an editable script (_template_), and a video rendering project. Next, you open the Templates panel (Figure

A page from Wis-Biz Weekly was still there when I came in on Monday. I thought I had been hacked. But, really, it was just that giant, scary snow monster from the West Virginia snowstorm. Check it out: According to the weather Underground blog, that's a 500-foot-tall (that's 151m or 152m, if you're a height-challenged American) wall of snow. And it's on the Appalachian Trail. Now, I'm not one to talk up tourism in the Mountain State. Let's just say there are many, many, many resort towns in the Poconos. There are ski resorts near my home that are more hospitable to snowbirds than to local people. But I have never, ever seen a snow monster before. It was huge. It should have been on a children's book cover, or at least a ski slope. (The guy in the video is also a weirdo. I bet he has a collie with a camera on him.) Then, Tuesday afternoon, I walked the West Virginia University campus. Lo and behold, the streets were clear. And snow had been falling all day. I'm guessing the monster was real, and was just stuck. The monster was real? I've never seen any evidence of that. How would you even prove it if you saw one? I'd say it was so tall, snow falling from it must have landed on my head. As for the guy in the video, I'm guessing he's a total geek. There's just no need for that many cameras. One more about my high school days. Whenever snow is forecast, and it had been falling all day, I can be guaranteed that my two-week-old Volkswagon Jetta won't make it up my driveway. Here's what happened last winter: Most of my students have finished their school year, so I've been working with fewer kids, and less snow. And, wow, do the cold and wind suck when you're driving. I got past The Iron Gate. But I pulled the car over a half a block short of my driveway. The forecast was for snow. I could see the white stuff falling. I knew

Q: What are the differences between "It is...", "It had been..." and "It was..."? What are the differences between "It is...", "It had been..." and "It was..."? Since I am studying sentences in American English, I often find myself using these sentences. There is no difference in the meaning of these three sentences. What about usage? A: Since you are studying American English, I am going to answer the question 'in American English'. These are all valid in American English. I generally write it like this: It was [situation]. The first uses the present progressive with a progressive or continuous construction. It was raining. It was cool. We were stranded. The second uses the past perfect. It had been raining. It had been cool. We had been stranded. The third uses the simple past or simple past perfect. It was raining. It had been raining. We had been stranded. However, you may get into trouble if you use more than one of them in a row. It's been raining for a long time. It had been raining. It was raining. In this case you probably should only use the simple past or simple past perfect. It was raining [past tense]. It had been raining [past perfect]. Rain is raining [present progressive]. One of the most enjoyable parts of First Friday at the ND. A wide variety of independent stores, galleries, restaurants and breweries along the streets of the Short North. Belly Up hosted their First Friday event this past Friday. We arrived a little late (sunset had passed and the thunder and lightning storm was on its way) and made our way to Belly Up. Most of the attendance was Young Professionals between the ages of 20 and 35. All in attendance really enjoyed the music and the snacks provided by the brewery. Perhaps even the "pre-game" beer tasted better that night (Partying before the show always tastes better). This First Friday at Belly Up was met with success. A large majority of attendees used their free drink coupons to get a taste of Belly Up beer. They were a little leary at first of the "Tent Fall" that is spoken of in the event trailer but they were soon
