Embedded C++ AutoCAD has an embedded C++ development environment based on Embedded C++, called INCLASE. INCLASE consists of a C++ parser which provides basic language support (primarily for programming AutoLISP). This allows developers to write AutoLISP code for any of the supported functions, and they can use the INCLASE parser to access and modify the design values associated with those functions.

Common Lisp AutoCAD has a built-in Common Lisp implementation called ECLIPSE and comes with an embedded Common Lisp implementation, called CLIM.

AutoCAD also supports the UTA-1 and UTA-2 hardware interfaces for running code written in Common Lisp. Perl AutoCAD supports Perl for embedded scripts and also integrates with the Autodesk Exchange Apps program. JavaScript AutoCAD has an SDK to automate AutoCAD drawing and design documents via JavaScript.

The AutoCAD JavaScript SDK is available on the Autodesk Exchange Apps for AutoCAD and can be used with any JavaScript-enabled browser, including Mozilla

Firefox and Google Chrome. Visual Basic AutoCAD supports the Visual Basic for Applications (VBA) scripting language for automatic customization, functions, and macros. Systems AutoCAD, released in 1989, is a program based on the integrated development environment (IDE) of Microsoft Windows, consisting of the file format, Windows File System (WinFS) and an API. The most important function of Autodesk's Autodesk Application Programming Interface (API) is to connect and communicate with the AUTOCAD API-based applications. A few of them are AutoCAD applications which are available on the market and act as a program extension or small application that can be used to perform AutoCAD or other functions. Other applications are the third-party Autodesk Exchange Apps which is a program extension that adds support for AutoCAD Exchange formats to another applications.

File format Autodesk's file format, WinFS, was developed as an evolution of the simple text-based file formats used in earlier applications such as "c:PRN" and "c:MYC" from the 1983 release of "c:DRAW". WinFS supports both the ANSI and the Unicode character sets.

It can be exported to other programs and provides a native representation of the standard AutoCAD drawing

On Wednesday, MSNBC’s Joe Scarborough had no trouble, himself, kicking up a fuss about Republicans blocking an election reform bill that is “doable and inexpensive” in the face of whatever “No bill is good enough for the far right!” “The most extremist members of the Republican Party will continue to undermine all the progress of the last 10 years,” he said. Ripping off the disguise that he’s a loudmouth on a gravy train, Scarborough said that despite the GOP’s history of trying to disenfranchise minorities — it’s been “an open secret” for years — not one Republican has actually said it aloud that he’s lost confidence in the U.S. voting system. But Scarborough, he said, is about to get himself one Republican to say something outrageous that shows how little confidence they actually have in the country’s elections. And, with just a little help from the

media, he can make the GOP's head explode: Don't just listen. Watch. Congressional Republicans oppose to a net neutrality repeal, and now supporters have drafted a new bill that aims to prevent the Federal Communications Commission from stripping away the internet's privacy protections. The new legislation, introduced Wednesday by Republican Reps. Marsha Blackburn of Tennessee and Jody Hice of Georgia, the chair and vice chair, respectively, of the House of Representatives' Communications and Technology subcommittee, states that the FCC should not adopt "rules or policies that would permit broadband providers to create rules that are inconsistent with or supersede the privacy protections of Section 222 of the Communications Act." The fight over net neutrality has been particularly bitter, with FCC Chairman Ajit Pai recently accusing Democrats of trying to "kill off the internet" by using the Congressional Review Act to roll back a set of rules passed during the Obama administration that prevented internet service providers from creating internet fast lanes. Republicans have repeatedly failed

Create new markup languages for new domains. Use markup to add notes and other information to your drawings, such as key actions, schedule, information, and changes. (video: 1:30 min.) Quickly annotate a drawing to add notes, changes, and visual aids. AutoCAD can create annotation callouts that let you highlight text, arrows, and other visual elements. You can also annotate drawings with text, color, or even 3D visual effects. (video: 1:05 min.) Embed feedback directly into your drawing. Use the insert callout feature to quickly insert other drawings from a file or URL into your current drawing. This allows you to design and code on your favorite computer without having to send the drawing to another drawing platform. (video: 2:15 min.) Clean up: Fix your mistakes and get back to work faster. Repair errant lines, vertices, and components. With the context-sensitive repair tool, you can keep working with any drawing. This lets you easily identify the source of your mistake and quickly correct it, without wasting time reverting to the drawing's original state. (video: 1:30 min.) Avoid common errors with the easiest and most accurate command dialog box. With this new command dialog box, you can quickly access all commands for drawing, editing, and annotation. The new command

dialog box features a new icon for each command, plus abbreviations to speed up searching for a command. (video: 1:22 min.) Find commands faster and easier than ever with up to date commands in the AutoCAD command bar. When you're looking for a command, you can find it in the command bar. You'll never have to worry about the command list growing too long, and you can reach all commands from one place. (video: 1:28 min.) View and modify measurements. With the new Measurement tool, you can view, edit, and modify existing measurements and properties. You can also create new dimensions and other shapes that automatically inherit the current drawing's measurements. (video: 1:35 min.) Navigate in 3D with your eyes. Navigate easily between 2D and 3D views with the new mouse wheel, plus zoom in and out of drawings using the cross-hairs. To navigate to 3D views, simply click your mouse on the navigation bar in the upper-right of your
