Young children spend a lot of time playing and, like all children, they play in their own way. Within the domain of play they are free to be themselves. When young children get frustrated by the lack of tools to play safely with, for example, climbing around tables and chairs, they sometimes smash them. If they do this a lot of the time, when they do manage to solve a problem, they feel disappointed by the whole exercise, which stops them from having a lot of fun and learning. Young children learn as much from playing with things they find as from learning from books. It is only by trying things out that they can learn. They learn from doing. They learn from play. They learn through working, though many people would deny that children need to work. They learn from doing

See what happens when you insert a symbol from a Symbols library: Symbol Comparison: The Symbol Comparison tool lets you compare symbols, in relation to one another. A Symbol Comparison dialog box will appear with a list of symbols side-by-side. When you select any symbol in the drawing, the Symbol Comparison dialog box will appear: Partial Design: A new optional feature lets you start designing a part by simply creating a sketch, with constraints that define its size and shape.
