AutoCAD is now widely used in engineering design, architecture, and manufacturing, and is the industry standard for 2D/3D drafting, rendering, and other features such as stereolithography. The AutoCAD keyboard shortcuts, commands, and macros allow users to quickly produce drawings, convert them to other formats, import and edit standard file formats (GIS, DWG, PDF, etc.), and work in other CAD programs. Key features of AutoCAD include Drawing objects from scratch, copying, editing, and modifying existing drawings Dynamically repositioning objects on the drawing canvas, which is later rendered Creating axis of rotation and dimensions, which are useful for engineering drawings Creating and modifying graphical attributes (colors, linetypes, lineweights, linestyles, linetype styles, fill styles, etc.) Measuring, calculating, and plotting coordinates Creating and editing text in a number of languages (English, French, Italian, Japanese, Korean, and Portuguese) Modifying graphical attributes and formatting text Saving drawings in standard file formats such as PDF, DWG, DXF, etc. Rendering, exporting, printing, and sharing drawings AutoCAD has been ported to a number of platforms, including Windows, Macintosh, and Unix. After a decade of gradual evolution, a new version, AutoCAD 2012, was released in September 2011. Key features of AutoCAD 2012 include Improved 2D and 3D object drawing tools and capabilities An updated, more intuitive user interface with full-screen CAD workbenches Improved industry-standard CAD file support (PDF, DXF, DWG, etc.)

AutoCAD/AutoCAD LT: AutoCAD is a commercial computer-aided design (CAD) and drafting software application.

Developed and marketed by Autodesk, AutoCAD was first released in December 1982 as a desktop app running on microcomputers with internal graphics controllers. Before AutoCAD was introduced, most commercial CAD programs ran on mainframe computers or minicomputers, with each CAD operator (user) working at a separate graphics terminal. AutoCAD is also available as mobile and web apps. AutoCAD is now widely used in engineering design, architecture, and manufacturing, and is the industry standard for 2D/3

For example I have a view that shows a list of items from a database. The ViewModel has a method that returns a List of items, but how do I then pass this data to the View? I know I can use a DataContext and bind my view to that, but how can I pass data to it when I'm at the View. A bit more of what I'm trying to do: This is my View Model. I have another class that I'm using to generate a list of items. I want to be able to call the method returnData() and have that return a list of items. I can then pass this list into my View. public class ViewModel { public List returnData() { //generate data and return } } This is my View. I have a TextBox and I want to bind the Text property of this textbox to a property in my view model. The List is what I want to pass into the View. A: I think you have to know that you cannot directly bind List to a TextBox, if it is the case I think you can have some dirty workaround. But if it is possible then you need to put the list in your ViewModel as a property and bind your textbox to the list's item, something like this: ViewModel public class ViewModel { public List returnData { get; set; } } View I hope this helps. . a1d647c40b
