lists. When it comes to cosmic matters, the world of pop culture sometimes comes a little too close to Earth for comfort. As NASA probes delve into the heavens and astronauts venture farther into space than ever before, the public sometimes gets a little confused about the reality of science fiction. Case in point: When last year, NASA released a video explaining how space exploration works, journalists asked for a description of one of the spacecraft's most unusual features: an emoji. It all began when Sen. Bill Nelson, D-Fla., posted NASA's response to an

---

interview question on Twitter. "The designers of the Dream Chaser took into account the emerging trend in emoji usage, including ones that are built into email, social media, websites and mobile apps," Nelson wrote. "They used this as a key consideration when designing the Dream Chaser, to ensure it is as user-friendly as possible and has a seamless integration into the things we all do every day." NASA said the space agency worked with a New York-based emoji design firm to come up with one that had the best visual impact. "The nose of the

---

Dream Chaser carries a resemblance to the head of a paper clip," NASA said. "It is a fun, friendly space emoji." The agency said it used the paper clip emoji to show what Dream Chaser is made of — two composites named the Modular Advanced Thermal Oxidizer Assembly (MATHO) and the Advanced Structures and

DSS DJ is a professional audio mixing tool that comes with a couple of powerful features. It is based on one-click beat-matching and synchronization. The user interface may seem crowded at first glance, especially for less experienced users. Since this program has been mainly developed for power users, beginners might have some difficulties adjusting to the DSS DJ environment in a short time. The main menu offers you access to configure DSS DJ, but also to start recording a session

(exported as a WAV file), while the browser enables you to manage songs, as well as create and modify song lists. In the 'Configuration' menu you can select audio output, enable beat matching when automatic DJ-ing is on, and others. The two decks are panels where you can play and loop songs, set cue points, scratch, include real-time effects, equalize, and kill frequencies, while the mixer resides in another panel, used to crossfade between decks, guide the signal to master and monitor outputs, to synchronize and mix songs. You can basically play with bends, spins,

---

reverse play, brakes, pitch, master tempo, an accurate automatic BPM counter, a beat-aware loop engine, a cut-off filter, DSP effects, and many more. DSS DJ uses a fairly small amount of CPU and memory resources. The only downside when it comes to navigation is the fact that you cannot move the interface, but only maximize it. In conclusion, DSS DJ is a great tool for mixing audio tracks, and it has many useful features even if it may represent a challenge for beginner users.

Equalizer provides a quick way to boost or cut audio levels, especially

---

for guitar recording. There are two modes, Normal and Master. The Normal mode allows you to set a certain level, say -10dB, and the Master mode enables you to set how low or high you want the audio to be. You'll need a midi controller with about 5-6 knobs in order to fully utilize the Equalizer's functions.

**NOTE:** This is not a midi instrument. Equalizer is a quick fix to boost or cut audio levels. It was created for guitar recording in the era of single-mic recording. It enables you to set a certain level, say -10dB, and the master mode enables you to set how
