(Review copy provided by developer, developer's support before submission) Gameplay: Music: The title has a pleasant music, which is instrumental and is played when you open and close the application. Graphics: The user interface is a simple and sleek one. The main interface is divided into four main parts, with different purposes, each having a different color. The first part has a list of words which are being added to the database at that point, while the second part is the online dictionary results, in case the user wishes to get an approximate transliteration of a word. The third part has a content area where users can write or dictate a transcription of a word. In terms of color, this one is also unique as it is in white, although the text is written in gray. The last interface has a database menu for the users to explore. Privacy: There is no information about the user's personal data in the application. Overall: The application is highly functional, however, the lack of any additional features hinders the possibilities of making it as a platform for learning vocabulary. The purpose of the app is to offer an initial vocabulary of one thousand words or so, with the hope that you will be able to memorize them. Those words are presented in a list format.

The program relies on a database that you can use to store new words, alongside pronunciations. It is suited for all audiences, on account of its ease of use and simplicity. Non-English speakers will be able to make use of a sample database, courtesy of the developer, but the possibility to create their own is still on the table. My vocabulary relies on a short and complication-free process that ends up creating a shortcut on the desktop, for quick access. As far as the appearance is concerned, the main GUI is rather simple and rudimentary, with very few eye candying elements. The sample vocabulary is automatically loaded during every startup, which might become bothering at a certain point. Therefore, if you choose to create your own database, you will have to load it every time you launch the application. On the upside, the sample vocabulary can be a great starting point for your future database, thus you can add new words to it and save the changes. The words inside it are organized into parts of speech, such as verbs, adverbs, adjectives, as well as by purpose, like medicine, cinema and so on. You can add new ones to this list using a dedicated dialog, where you can specify details such as pronunciation and explanation. The good thing about My vocabulary is that it can be used by all non-English speaking users, regardless of their native language. However, it needs improvements in functionality, so as to allow users to manipulate vocabulary topics the right way. The features of My vocabulary can be summarized in 4 categories: • Store new words: The main feature that makes this app unique. You can store new words in your database by entering them in a simple dialog. Before recording the word, you can define its meaning, location, etc. • Explain words: If you are a teacher, you may find this feature to be great, however, for non-English speakers, the explanations may be a bit shallow.
