The Random Number Generator you selected could not generate a large number of random numbers. They contained only a small amount of true random numbers. This problem can arise for several reasons. Your seed value is not large enough. Your performance counter has a short value range. Your performed actions have caused a window to appear on the screen. If you like to generate huge numbers, TRaNGen is what you are looking for. TRaNGen is a powerful Random Number Generator you can use to create huge collections of random numbers. TRaNGen can support random number generating tasks on different devices, including PCs, laptops, mobile phones, tablets, as well as on desktops and servers. When you call TRaNGen's Random Number Generator you can generate large quantities of random numbers. The software creates a large pool of true random numbers that you can use for simulations, simulations, and randomness verification. TRaNGen supports two methods for generating random numbers, which determine the algorithm that generates numbers. These methods are called Microsoft Mode (default) and Araneus Alea I. The Microsoft Mode algorithm generates random numbers using the PRNG algorithm in Microsoft Windows. It can generate large numbers of random numbers with the possible range of. The Araneus Alea I Random Number Generator creates truly random numbers following the TRNG algorithm in the Araneus Alea I library. TRaNGen can support the following number types: Byte (1-8), Integer (32), Sign (1-bit), Unsigned (1-bit), Float (double precision). Using the Intel® and AMD Portable Operating System (POS) you can generate random numbers using the "Time Measured" operation and access these Random Numbers in the Real-Time section of the Intel® or AMD POS (if the selected CPU allows it). Using the Windows NT or 2000 OS you can use the Time Measured "Secure Random Number" Operation and access these Random Numbers in the RNG area of the Windows NT or 2000 OS. Using the Windows Me, Windows CE, Windows XP, Windows Vista, Windows 7, Windows 8, Windows 8.1, Windows 10, Windows Server 2003, Windows Server 2008, Windows Server 2012 and Windows Server 2016 OS you can use the the Time Measured "Secure Random Number" Operation and access these Random Numbers in the RNG area of the respective OS.
