

Unknown Device Identifier Download PC/Windows [2022]

Unknown Device Identifier (UDID) is a program that uses information on the hardware of a computer to identify and download drivers. The program is fast and intuitive, and can be used to install and download drivers for an unknown device on the computer. The download drivers will be identified from the manufacturer's website. Unknown Device Identifier is the result of the partnership between TechnoSoft and Unknows Network, Inc., and it was developed with efficiency and simplicity in mind. UDID uses a Microsoft Windows library called "Windows Driver Kit" (WDK) to identify and download drivers. Drivers are identified using simple queries to the company that made the hardware, rather than using complex patterns and proprietary algorithms. As a result, you can count on the latest and most up to date drivers for your equipment. UDID only needs a few minutes to finish a driver download for an unknown device, so it is the perfect tool to go through the process while you play a game, or any other type of software. Other features The program also keeps track of all the installed and available drivers on the system, so that you can get a full report on the status of your devices at a glance. In addition, it's very easy to backup all installed drivers and important system files, or import a plain text file for safekeeping. Unknown Device Identifier Key Features: • Comprehensive search engine to locate and download drivers for unknown devices • Hardware IDs for unknown devices are automatically extracted from Microsoft Windows, so that you can have access to them • Easy to use and intuitive, the program is suitable for all types of users, even those who are not very experienced • Easy-to-use interface, with a non-intrusive design that does not slow down the PC • Configure Windows Device Driver Search Options to customize the search process • Backup and import system files, including all Windows drivers • Register and uninstall device drivers for unknown devices The program is very simple to use, with no in-depth knowledge needed to use the product. It can be installed and run with just a few clicks, and you don't even need to register before using it. The program comes with a built-in interface to simplify the process. The software is very responsive, even if it's installed on a system with multiple drivers. It's not a program for advanced users, as it doesn't require additional knowledge of installation and installation tools.

It features an intuitive set of options which make the app accessible to all types of users, even the ones less experienced with such software. Fast setup and simple interface The installation procedure does not take a long time to finish. As far as the interface is concerned, Unknown Device Identifier is wrapped in a regular window with a plain and simple structure. It takes a while to load all devices at startup. View, export and look up drivers They are listed in a hierarchical view with driver names and details. This list can be printed or saved to a plain text document for further evaluation and safekeeping. For each selected device, Unknown Device Identifier can look up its driver name on Google, as well as bring up the vendor address to contact them. There are no other notable options provided by this software utility. Evaluation and conclusion Unfortunately, Unknown Device Identifier does not come with an online database to automatically find and download drivers. The backup feature shown in the right-click menu is not integrated into the program, since it requires the installation of another app made by the same developers. As expected, it does not put a strain on PC performance, since it runs on low CPU and memory. It has a good response time and takes a reasonable amount of time to finish a scan job concerning identified drivers, during which it looks as if it's frozen. However, no error dialogs were shown in our tests, and the program did not hang or crash. In conclusion, Unknown Device Identifier can only be used for its main goal: identify unknown devices. For the next part of finding, downloading and installing drivers you should look for another, more powerful application.Q: How to
