Also, if you want to read about the theory behind how the effect is created. there are a bunch of articles on that as well. Fluids Cat - Make The Same Simulation ► Are you new to X-Particles? If so please read these articles:.In recent years, combined phase detection (hereinafter, may be referred to as “PDM”) in which PDM is combined with a carrier phase detection (hereinafter, may be referred to as “CPD”) has been performed in a CDMA system. In the PDM, a phase of a received signal is detected by utilizing correlation value of I and Q signals of a received signal, and a phase error of the received signal is detected using the detected phase. The PDM is expected to be applied to a communication system in which a large amount of data is transmitted at a high speed. In the PDM, the I signal and the Q signal are multiplied by separate multiplier circuits with the same frequency and then the I signal and the Q signal multiplied by the respective multiplier circuits are input to correlation detecting circuits respectively, and the correlation detecting circuits detect a phase of a received signal by calculating a correlation value. In the PDM, when a large amount of data is transmitted at a high speed, a phase of a received signal is fluctuated in the time base direction (correlation value is fluctuated). For this reason, when the phase of the received signal is detected using the correlation value calculated by the correlation detecting circuits, it is difficult to correctly detect the phase of the received signal. Particularly, when a phase error is detected by using the I signal and the Q signal, fluctuation in the correlation value is larger than fluctuation in the phase of the received signal, and therefore, the detection of the phase error becomes significantly difficult. The present invention has been made to solve the above-described problems. An object of the present invention is to provide a communication apparatus capable of detecting a phase error of a received signal with high precision and a communication system using the same. Further, another object of the present invention is to provide a communication apparatus capable of detecting a phase of a received signal with high precision and a communication system using the same.Cancer risks in 10- to 19-year-old Finnish adolescents born in 1944, 1949, and 1954. In 1944, the Finnish government was informed of the prospects of using chemical weapons in the war against Germany. The effect 82138339de
