

---

want to go through each of the data frames and find the maximum Year value per level, so the final list would look like this: [MaxYear] [MaxLevel] I've been trying to do something like this: for fname in basename: data = {} for line in basename: if line.Year == "": print(fname, " is missing a year value") elif line.Year == fname.MaxYear: print(fname, " is missing a year value") else: data.update({line.Name:line.Year}) print(fname, " has " + line.Year + " as the highest year") But that doesn't work, I get TypeError: '\_io.TextIOWrapper' object is not callable. A: It's a good idea to include a filename in the basename variable as this can come in handy if you need to reassign a different file to the loop, or to clean up the output. Something like this should work: import glob import pandas as pd  
basename = "sorted.csv" 3e33713323
