"We are sad to announce that the SEGA CD, SEGA's fifth generation console, will not be sold to the public," said Yosuke Matsuda, senior staff at SEGA in Japan. The company only confirmed its second-hand purchase option, which has been available since the console was released in 1992. SEGA also reiterated its future plans for the Sega CD, which are to release a new version with updated hardware, announce two upcoming games and continue to support the console. SEGA is one of the biggest video game producers in Japan and a leading developer of arcade games, though it's been a shadow of its former self since the early 1990s. According to a story from The Guardian, the company has an annual profit of ¥1.1 billion (£4.5m), down from ¥6.7bn in 2006. To help pay for its rise in losses, SEGA is looking to cut over 2,000 jobs, though it was rumoured to be looking at selling some of its properties, such as SEGA's Racing Studio in Kobe. UK PR Comments Comment number 25. Sun Oct 28, 2009 at 11:01AM It's pretty sad that the sega CD is not available to the public.I wonder if it would of sold more units if it were, given how popular this system is. I guess there's not many countries left where it hasn't been released. Comment number 24. sunwind36 Sun Oct 28, 2009 at 10:42AM Why do they have to destroy everything? Comment number 23. What's New in the AutoCAD?

See how one of the most popular paper-based software tools has evolved. AutoCAD 2023 has a redesigned user interface that is easier to navigate. Now, when you import a paper-based drawing into AutoCAD, you will automatically see feedback from the originator of the paper-based drawing, which is based on paper-based feedback. It works like this: you use the markup function to create comments on the drawing and send the drawing back to the originator. You can also easily view and modify the paper-based feedback and comments. So, if you send a drawing back, you will see your changes on the drawing right away. (video: 5:13 min.) Markup Assist: Collaborate more efficiently with others using a markup assistant. With the new Markup Assist feature, you can work as a pair, team or group, creating and modifying drafts with all the benefits of the graphic interface, plus the unique abilities of the markup tool. (video: 6:08 min.) Search and Match: Search and match enhancements make it easy to find similar blocks, features, dimensions and points. The new search and match functions are easier to use, even when you are working in multiple views. (video: 1:17 min.) Other new features: Accurate measuring using the new Circle, Ellipse and Polyline tools has a new option. Now, you can select the adjustable aspect ratio for your measurements. You can have the option to have the horizontal or vertical measurement lines extend through multiple subdivisions. (video: 1:04 min.) Pair printing: Print your drawings on both sides with the new Pair Printing feature. The options include a choice of paper size and color and the print operation is supported by the latest 3D printing technology, such as selective laser sintering and direct metal laser sintering. (video: 3:30 min.) Revisiting an object with the Polar Tracking feature: You can see how a drawing element moves in 3D when you use the 2D Zoom tool or the 2D Slide tool, or both. The 2D Zoom tool allows you to navigate the drawing and zoom in on a particular element. The 2D Slide tool lets you slide over the objects on a section by section basis. (video: 4:35 min.) Shared markups: Now, you can turn each of your markups into a
