channels and permissions *
Quickly set up a server * Able to
change your Client Profile *

Based on TeamSpeak open source * Free to use * Can use a variety of VoIP providers such as Jabber, MSN, AIM, Skype, Google Talk, RTPO Description: TeamSpeak Client 1.2.4 is a voice chat software developed by TeamSpeak (TS). TeamSpeak Client 1.2.4 is a voice chat software developed by TeamSpeak. TeamSpeak Client is

a voice chat application that allows you to easily communicate with your friends over a channel. The impressive voice quality, the noise reduction implemented in the latest version, together with the possibilities to adjust microphone settings in order to acquire the best sound make it the software of choice in Voice over IP communications.

Carefully adjust microphone settings. Configuring it is very easy because TeamSpeak Client is probably one of the best organized and well-documented software ever created. It offers information, tips and explanation every step of the way. Once installation is complete, you are presented with a Setup Wizard, so adjusting the initial settings

isn't rocket science. The next step is to test your microphone by adjusting the level of your voice (TeamSpeak Client takes into consideration the background sounds, whispers and breathing), and optionally assign hotkeys to enable Microphone Mute and Speaker Mute. Tips are offered every step of the way. For example, when you choose your

nickname, the software tells you this is only to display your identity, and not in any way connected to a username (which is usually permanent in other similar software). Choose how and when to talk Voice Activation Detection or Push-To-Talk can be enabled, so the software automatically recognizes your voice and displays your

nickname to the other users, or awaits your command to do so. What you need to do next is to log on to a server and start chatting

What's New In?

Voice Chat on the Desktop—completely customizable and intuitive The

TeamSpeak Client offers everything you need to create a fully-featured voice chat system. We believe that features like channel mutes and hotkeys are intuitive. Build your own client: Easy to customize and personalize With TeamSpeak Client, create your own clients and identities. Choose your name and color scheme, change the

color of the buttons, choose your own sounds and skins. In minutes, TeamSpeak Client is up and running! With Voice Activation and Push-To-Talk, your conversations won't be interrupted by background sounds Using Voice Activation Detection and Push-To-Talk, you can interact with the other users in a natural way. Comprehensive

feature set With TeamSpeak Client, you can do more than just use your chat client. Read the fine print on any settings page, as you never know what this software is capable of. With TeamSpeak Client, you'll never miss a beat. Improved audio quality TeamSpeak Client for Mac comes with all of the features you need to use a voice

chat client. However, to preserve your privacy, we didn't want to spend a lot of time reinventing the wheel. More filters for your voice and background sounds

TeamSpeak Client has new noise filters that help you reduce background sounds. Choose your preferred sound (one of ten or more) and the volume will be adjusted automatically according

to the new filters. Create customizable profiles for your speakers In the TeamSpeak Client, you can easily customize your speakers' profiles. For example, when one user speaks into the microphone, the others will hear a specific sound and won't hear another user's sounds. Fully documented TeamSpeak Client is a richly documented

software. It's easy to get started with it. TeamSpeak Client is an open source project TeamSpeak Client is licensed under the GNU General Public License. The TeamSpeak Client is still actively developed: see changelog. No other program for VoIP on Mac. Features: - Unparalleled voice quality - Windows/Mac/Linux support - Automatically detects

microphone settings - Noise reduction - Anti-echo - Voice activation - Push to Talk - Audio mixing - Built-in help There is no other software that allows you to have conversations without being disturbed by others sounds, like microphone noises, static and/or background sounds. TCS Voice is designed to be intuitive and to be easy to use, so you can be always

available on-line without interruptions. Voice quality Using the TCS Voice's innovative combination of automatic and manual settings, you can control
