It is often used as a basic tool of connecting users to other users. It is also useful for communicating and discussion. Other works associated with data-communication include "Gmail Chat", "WhatsApp", "Skype" etc. Some Social Networking sites are focusing and concentrating on one thing only, viz. social networking. But since we know that a social network should provide more, we have come up with a social networking site that provides the facility of collaboration too. This will help in sharing your files, pictures, media and more. This collaboration tool helps in creating events among members of the site. Members of the site can talk, discuss, and share their ideas. Collaboration on a social networking site is the essential part of any social network. It is often used as a basic tool of connecting users to other users. It is also useful for communicating and discussion. Other works associated with data-communication include "Gmail Chat", "WhatsApp", "Skype" etc. Let's start with the basic 'personal' sharing. This means that members of the site can share only their files and other media. There are two ways to share a file. One is 'File transfer'. This makes the file directly accessible to the recipients. The second one is 'Upload'. This makes the file temporarily accessible to the sender. Once a file has been shared by sending it, the recipient can 'accept' it, thereby keeping the file permanently accessible to them. This is the same thing which happens when an e-mail is being sent to the recipient. So the e-mail file is again sent in the similar way. Once it is received, it is stored in the recipient's folder, pending their acceptance. Moving on to 'Team' sharing, once a team is created, any member of the team can send a message to all other members of the team. This can be used for scheduling meetings, conferences, discussions etc. Any member can initiate a meeting. Once a meeting is initiated, any member can join and leave as per the convenience of him/her. And if you think it is a one way communication, then we have a surprise for you. You can

! Till recently, how many of you knew what happened to Telegram during its developer conference? One of the biggest, more respectful fans of the service, even known as "a security risk" by the team behind Telegram, may have just told you "everything" was now available to everyone. The big news As announced by the official blog post, Telegram 2.0 is now available on iOS and Android. The app will be able to decode multiple different languages and will now be able to make video calls just like on WhatsApp. Indonesian: As usual, we are going to check how the app performs under the spotlights, but before that, let's quickly review what's new in the version 2.0. The biggest update The biggest upgrade Telegram presents is the integration of the Universal Profile. It is an addition that is only officially available on iOS and Android right now, but the service is inviting its users to try it out by signing up on the website for the first time. That said, to be able to test the app's new features, you need to be on the new Telegram V2 to properly install the app. The whole process is quite simple and just involves entering your phone's details (IMEI, nickname and the country), with the mobile operator's address and some optional information. Once the process is finished, you just need to launch the app and connect to your mobile number to continue. As you may be expected, some data is being transmitted to the servers of the service, including contacts, data that is obtained through your Facebook account, Twitter, and even data from your PC. French: Comme d'habitude, nous voulons voir à quoi Telegram s'est comporté durant son congrès de développement. Un ami respectable du service a dit qu'il contenait "tout" Malheureusement, les derniers développements de Telegram ont suscité, au sein de la communauté télégraphique, d'une controverse au début du congrès de développement. Les nouveaux extras Le nouveau fichier étant disponible maintenant sur iOS et Android, rien ne s'est passé qu'il soit à la portée de tout le monde. L 09e8f5149f

Predictors of recurrence and survival after complete resection of glioblastoma: analysis of 1,984 patients. The authors sought to identify a homogenous group of patients who may benefit most from adjuvant therapy, i.e., those with (1) gross total resection, (2) complete resection on magnetic resonance imaging (MRI), (3) typical clinical characteristics, and (4) radiographic evidence of necrosis. The authors analyzed the outcomes of 1,984 patients with a diagnosis of glioblastoma who were treated with complete resection of tumor and received adjuvant radiotherapy. All patients presented with a median Karnofsky Performance Status score of 90 and had a median age of 57 years. Complete resection was possible in 1,154 patients (55.8 percent). Of these, 858 (73 percent) had a similar course to that of the 1,182 patients (65 percent) with complete resection and underwent standard radiation therapy with concurrent and adjuvant temozolomide. Progression-free survival and overall survival were significantly longer in the complete resection group than in the incomplete resection group. Univariate and multivariate analysis was performed to identify predictors of recurrence and survival. On multivariate analysis, age ($P = 0.01$), disease duration (P
