Technical Field This disclosure relates to an operation keypad including a keypad circuit configured to perform a function in accordance with an operation input signal of the keypad and an external contact unit electrically connected with the keypad circuit to supply the keypad circuit with a power supply voltage. 2. Description of the Related Art In recent years, an operation keypad in which an operation keypad circuit is formed integrally on a mounting substrate on which an integrated circuit (IC) including a key detection circuit for detecting an operation input signal from the operation keypad is mounted has been used (e.g., see Japanese Unexamined Patent Application Publication No. 2001-141686). In an IC in which the keypad circuit is formed, there is a known keypad circuit including a key detection circuit for detecting an operation input signal from the operation keypad, a function determination circuit configured to determine whether the input signal is to be treated as a high-level or low-level signal and a power supply circuit configured to supply a power supply voltage to the function determination circuit and the key detection circuit. In the keypad, there are some cases in which a contact unit for supplying a power supply voltage is connected to the keypad circuit to supply the power supply voltage of the power supply circuit. For example, when the contact unit is directly connected to the power supply circuit, a high voltage is applied to the contact unit when the contact unit is connected. There is a possibility that the operation keypad may be damaged due to a leakage current and the like from a high-voltage component, which is a constituent component of the contact unit, when the contact unit is directly connected to the power supply circuit. To avoid this, there is a known technique in which the power supply circuit is separated from the contact unit and the keypad circuit is supplied with the power supply voltage from the contact unit (see, e.g., Japanese Unexamined Patent Application Publication No. 2001-141686). In a keypad including a keypad circuit in which the power supply circuit is separated from
