invention relates to the field of electronic circuits. More particularly, this invention relates to programming multiple flash electrically erasable programmable read only memories (EEPROM) cells in an integrated circuit (IC). Flash EEPROMs are relatively inexpensive, have a high memory density, and are programmable (i.e., can be written to), erasable, and reprogrammed in-circuit without requiring special machine-off conditions. In addition, flash EEPROMs offer the advantage of significantly higher write speeds than ca3bfb1094
