AutoCAD Crack [Updated-2022]

What is it? AutoCAD is a PC application that offers two types of CAD: Drafting - The ability to create three-dimensional drawings. This includes the drawing of mechanical structures, architectural drawings, and electrical, plumbing, and pipe design. - The ability to create three-dimensional drawings. This includes the drawing of mechanical structures, architectural drawings, and electrical, plumbing, and pipe design. Modeling - The ability to create three-dimensional surface and solid models. AutoCAD is both a desktop and web-based application. The AutoCAD web app is free to use, while the full AutoCAD desktop app is sold at a price of US\$1800-6500. Autodesk offers discounted student, education and academic pricing for AutoCAD and related programs. A user account is needed to run a drawing that contains one or more projects (also known as models). Autodesk AutoCAD History Autodesk AutoCAD was first released in December 1982 as a desktop app running on microcomputers with internal graphics controllers. It was built around the concept of CAD and drafting software that used the same kind of input devices, such as pens and pencils, that architects used when preparing plans and designs for actual construction. The AutoCAD application was first developed by Al Bally, an engineer at the San Francisco office of the Autodesk Company. In 1981, Al Bally began working on a version of AutoCAD that included more sophisticated drafting tools and concepts. By December 1982, Al Bally and his team were able to demonstrate the first version of AutoCAD to the Autodesk executives. When Al Bally first introduced AutoCAD to the Autodesk executives, the product was very expensive, costing US\$1,000 for the basic system and an additional US\$1,000 for the application. When Al Bally first showed AutoCAD to Autodesk executives, the basic package was priced at US\$1,000, and AutoCAD was being marketed primarily as a drafting package. In 1983, Autodesk started marketing AutoCAD as a complete system that would provide architects, engineers, and other professionals with a comprehensive set of CAD tools to create three-dimensional designs. In addition, Autodesk began offering AutoCAD as a web-based application, and renamed the program AutoCAD LT for low-volume users. AutoCAD web was originally

Patents AutoCAD, Delcam, and IntellCAD have been protected under a large number of patents from both national and international patent offices. On September 1, 2014, a number of patents were approved by the U.S. Patent and Trademark Office (USPTO) in the "delivery and rendering of digital content" and "modifying digital content" areas. This includes a patent on an integrated solution for web-based digital content creation. From July 20 to 27, 2009, the USPTO issued a patent for a "tool for aiding in the creation of floor plans using topography models". The patent was awarded to Autodesk, with John R. Meyer as inventor. This patent has been followed by many other patents, including "erasing a set of elements from a model" and "simulating dimensional changes to objects". These patents were applied to the earlier versions of AutoCAD. A number of patents have been issued in Europe. From January 26, 2000 to June 24, 2002, the European Patent Office (EPO) issued a number of patents to Autodesk including one on a "method of selecting a first surface from a set of surfaces and a second surface from a set of surfaces based on selected rules". These patents are related to the features for using symmetry in 3D. In Canada, from January 19, 1994 to January 31, 1994, the Intellectual Property Office of Canada (IPOC) issued a patent to Autodesk for "determining the points of intersection between surfaces of a geometric figure and determining a local orientation of said figure by interpolating between said points of intersection". In Australia, from July 1, 1985 to July 1, 1987, the Intellectual Property Office of Australia (IPOA) issued a patent to Autodesk for a "method of building a database of complex geometric shapes from a database of simple geometric shapes and for creating complex geometric shapes by linking together segments of the shapes in the database". A number of patents have been issued in the Philippines. On March 19, 2005, the Intellectual Property Office of the Philippines (IPOPILIPH) issued a patent to Autodesk for "using interpolation to determine the location of specific points on a given body or surface".
