Approx. 80% of AutoCAD users are female. AutoCAD is a registered trademark of Autodesk, Inc. AutoCAD is a vector graphics-based CAD and drafting software application that was first released in December 1982. Since then, many versions of AutoCAD have been released and major versions have been released every four years since the original release. The last major AutoCAD release was released in 2018 as AutoCAD 2017, and the next major release is scheduled for 2019. History AutoCAD's history dates back to a 1982 version of Parametric CAD created by Gary Kildall, the creator of the operating system CP/M, and released by the company Apogee Software. Parametric CAD was released as a free-of-charge software application for CP/M computers but, later, for the new CP/M-86, a professional operating system that had been developed by Kildall and released by the company Digital Research Inc. The CP/M-86 was different from other CP/M computers in that it had a built-in graphics card. The graphics card made it possible to run multiple graphical applications simultaneously. However, Kildall had not designed the graphics card to support CAD applications and thus, Parametric CAD could not be run on the CP/M-86. This problem was resolved by Arthur V. Palamidessi, a programming consultant who worked at Digital Research. Palamidessi added support for CAD applications to the CP/M-86's graphics card, and released the first commercially available CAD software application, ConceptDraw. Palamidessi released the CAD version of Parametric CAD later, and in 1985, it was renamed to AutoCAD. In addition to the Parametric CAD features, AutoCAD was enhanced with features of a structured vector drawing program, and the now-standardized 2D drafting features. The first release of AutoCAD was for a CP/M-86 computer. However, over time, AutoCAD has been released for a wide variety of operating systems, including both the Microsoft Windows and macOS operating systems. In 2016, Autodesk also released a version of AutoCAD for Apple's iOS and Mac OS mobile operating systems. Since its first release, AutoCAD has been continuously improved, especially in the area of its user interface and ease of use. AutoCAD has been released in over 30 languages. In 1982, the company Autodesk

I have an ip address to which I'm trying to connect with a session value from PHP. The session I'm trying to retrieve is stored in a database. I'm using the following code to get the session value: if(\$this->session->userdata('id')!=") { \$user=User::getUser(\$this->session->userdata('id'));\$session=Session::getSession(\$user); //code using \$session here } else { echo 'Incorrect username or password!'; } In the session I have: Session::\$session\_id = "ssss"; Session::\$session\_user = "P"; This is what I'm using to retrieve the session value: \$sql = "SELECT session\_id, session\_user FROM sessions WHERE id = :id"; \$query = \$this->db->prepare(\$sql); \$query->bindValue(':id', \$this->session->userdata('id'));\$query->execute(); \$result = \$query->fetch(); However, nothing is being retrieved from the ip address. I've tried multiple different things. I tried storing the session id in the database before and then reading it out, but it's just giving me NULL. Any ideas? A: If you need to fetch session value from database then you should use session\_id() method of the session object. \$sessionid ca3bfb1094
