Brush Types Brush Types are the different types of brushes that Photoshop offers. They vary depending on their use, size and type. But it is important to know all the features of a brush type in order to make the best use of a type. The Options menu gives you access to various settings depending on the brush type and what effect you are working on. For example, the Eraser brush type has settings for hardness, size, angle, and opacity. Some of the more common brush types include: Brush with an adjustable opacity setting Brush with an adjustable size setting Brush with an adjustable angle setting Rounded brush Lofty brush Pointed tip Keyboard shortcuts You can use keyboard shortcuts to speed up the editing process. For example, the Command+T shortcut can be used to duplicate an image. Making Customizations Brush Strokes can be customized in order to produce specific results. By adjusting different attributes of a stroke you can adjust the effects of an entire stroke. The Pen Width slider allows you to adjust how wide or narrow the stroke is. By adjusting this slider, you will get the desired width and thickness of your strokes. The Pen In and Out sliders allow you to adjust the curve of the stroke; making it more rounded or more pointed. The Detail parameter allows you to adjust the diameter of the tip of the stroke, and also its size. It is important to have a properly sized brush as a small brush will not produce a reasonable result. The Opacity parameter adjusts how transparent the stroke is, and is useful when you want to duplicate a stroke and create an embossed effect, for example.
