Of course, at first it won't be as easy as you might think before, 'cause the soil is pliable only at the very upper layers. The deeper you drill, the harder the rocks are, so you can't easily drill them. Damage Recommended Posts I tried the starter pack on the Chinese server and was able to stack damage...but some of my settings were off. Here's my T10 M-A with a few customization changes and with games with my favorite weapons. A few notes: I use the camel fur hat and the backpack in the pic is the pugeot. I play with ~2000 points of damage with steel and bazookas. I played with 1900 + bazookas and I got to 25 % of my health left. Although it might seem like a video, it was recorded with Camtasia on my computer, so there might be some latency even if it's steady and smooth. I'm also noticing in the guerilla used "S.M.A.R.T" as a caller, which means that the application is updating the sim inside the game. To make a long story short, "S.M.A.R.T" makes the simulator more realistic than any other independent application would, but it slows down the network traffic too much for game servers. On the tests performed on my computer it's a minor problem, but for the bigger servers with a larger number of players it's too slow. The recommandations state that it could be an issue with 1,5MM

of simultaneous players, so I decided to start the increase of the sim update interval from 60 sec to 120 or 180 sec. In my tests (just a few days of play at 1200 players) I didn't notice any great difference in the network traffic. The biggest difference was the sight: from camtasia camera shots it seemed as if I was completely surrounded but apparently I wasn't even on the map because I could bomb and I could see the gun smoke, but once I moved it became very evident that there was no one inside my enemy's base. Could be a placebo, but I think it's worth having a look at. If anyone's got experience with that or has some suggestions on how to combat that behaviour...I'll be interested to see! I used only M-A as a tank and M-D as a plane, but that was the most common configuration on the server as well. With M-A I used my favorite premium set: 7xTier 19 5.56 Calibers equipped with my current mod of choice, which I'm used to: the G36.
