It can occur as a result of simple liquid-vapor contact without any additional phase change, as a result of the formation of a thin liquid film between phases that are already mixed, or as a result of a change in the contact angle between two liquid phases. The changes in wetting can often be classified into three categories, namely the wetting transition at the free interface, the evaporation of a liquid film, and the penetration of a liquid into a solid. In the present disclosure, the term "wetting" is used in a broad sense and covers all three categories. The wetting behavior of liquids on surfaces is of particular importance to many technologies. For example, the wetting of a surface is of great importance for a variety of optical technologies including optical surfaces, liquid lenses, and microlens arrays, such as photonic crystals, or for microcavity resonance. The wetting of microstructures or micro
