Naughty and Nice: The Good Girl Art of Bruce Timm - Paperback by Bruce Timm. Livre noyau Naughty and Nice: The Good Girl Art of Bruce Timm,epub,PDF,e-book,web,dp. About this title:The management of large congenital scalp defects. Of all cranial skull defects, the largest are those of the scalp because they can present anesthetic and cosmetically challenging issues. Scalp defects can range in size from small halo defects with large bony margins to defects that involve the entire scalp with a completely blown out cranium. Our purpose is to describe the design and creation of a large scalp defect at the point of calvarial bone excision at craniotomy. The scalp defects at the point of craniotomy were reconstructed with both a ribbed and a cross-shaped scalp flap. Ribbed flap design, which involves a thin scapular dissection, allows for wound closure without tension and allows for stabilization of the subgaleal plane. The cross-shaped flap is designed to provide a reliable closure of the scalp defect, while allowing for long-term aesthetic reconstruction. The scalp flap is designed before the craniotomy so that the design can be adapted to the geometry of the dura, edges of the craniotomy, and the bone defect. With the ribbed flap, the scalp is expanded at the dural edge of the craniotomy to allow for closure of the craniotomy defect. At the conclusion of the craniotomy, the ribbed flap is spread in a subcutaneous plane to create a "strut" of subcutaneous tissue

---

and then folded over to provide for a tension-free closure of the craniotomy and exposure of the dural margin of the craniotomy. The cross-shaped flap is designed with a central vertex parallel to the calvarial defect edges. Careful trimming of the central vertex is performed so that a feather-like movement of the scalp is achieved. This causes the vertex to lie over the defect and the scalp to be suspended in a tight plane. There is no tension on the craniotomy edges; thus, they can be approximated without undue tension. Both flaps are designed with allowances for adjustment to the dural margins and possible use of a hair implant to promote a natural appearance of the scalp. Ribbed and cross-shaped scalp flaps provide an excellent outcome for the repair of large scalp defects. This has led
