AutoCAD is most frequently used for architectural and mechanical design, engineering, and construction drawings.

Applications include piping, wiring, plumbing, and electrical work. AutoCAD is used to simulate systems such as climate control, ventilation, and air flow, as well as industrial production. AutoCAD is popular among architects and engineers because it is easy to use, requires little or no training, and can do tasks that other CAD programs cannot.

What Is AutoCAD Used For? AutoCAD is a general purpose CAD program that can be used for virtually any type of drafting. CAD (Computer-Aided Design) CAD is used to design and draft three-dimensional (3D) objects and related documentation. CAD has two primary uses: Drafting an assembly Designed for use in industry, CAD programs can be used for 3D modeling and fabrication. Industrial applications include components, equipment, and assembly.

AutoCAD is most often used for industrial applications. For example, it is the CAD tool of choice for: Large aircraft Manufacturing facilities Shipping and receiving Buildings, bridges, and dams Automobiles Automotive design Roofing Buildings, roads, bridges, and dams Frequently Used AutoCAD Functions The AutoCAD features most often used by architects and engineers are: Drafting When a user needs to make a 3D drawing, AutoCAD is used. CAD is used in general for three-dimensional design and drafting. A 3D drawing can consist of parts and assemblies, as well as any types of relationships (as with geometry, dimensions, and relations). Engineering AutoCAD is an engineering program and is used for: Mechanical Architectural Structural Design, coding, and documentation Piping, heating, and cooling Distribution Interior design Chemical Sanitary AutoCAD is the most frequently used CAD program for these types of drawings. Adenine methylase of *Campylobacter jejuni* NCTC11168: characterization of the gene and its expression. Methylation of adenine of DNA and RNA is performed by the type II restriction modification systems of *Campylobacter jejuni* and other bacteria. The adenine methylase of *C. jejuni* NCTC11168, designated Cj1323, was cloned, and the gene was mapped. The structural gene was located at *C. jejuni* locus Cj1323 on a 9.3 kb DNA fragment and its product was found to contain 1.7 kb of 5'- and 2.4 kb of 3'-flanking

sequences. The Cj1323 coding region was composed of 1406 bp, which encoded 471 amino acid residues. The amino acid sequence of Cj1323 was most similar to that of HaeIII, a restriction endonuclease from *Haemophilus aegyptius*.

The sequence of the 5'-flanking region of Cj1323 was rich in the consensus sequence (AT)_n(AT)_n. Cj1323 was expressed constitutively in *Escherichia coli*, and the methylase activity was completely inhibited by the addition of purified Cj1323. Expression of the gene in *C. jejuni* NCTC11168 was detected by methylase activity using ca3bfb1094
