We evaluated the prognostic significance of TILs in a large series of patients with bladder cancer (BCa). We assessed the prognostic value of TILs in 449 BCa patients treated by cystectomy from 2000 to 2005. We evaluated the following factors in the univariate and multivariate analyses: age, tumor stage and grade, tumor size, presence of lymph node metastases and number of TILs. Median follow-up was 66 months. Overall survival (OS) at 1 year was 87%, at 3 years 77%, and at 5 years 69%. TILs were present in 75% of patients.
