Use these tips to get the most out of Elements: *

- **Preview your image on your computer.** Check your photo for color and tonal balance before you edit. Edit the image on your computer, so you can see exactly what you're doing.
- **Export your image from your camera to your computer.** I explain how to transfer images from your camera in Book III, Chapter 5.
- **Elements has many powerful features that you use much more frequently than in Photoshop.** For example, the Spot Healing Brush does not appear in the Photoshop Essentials DVD; you use the Spot Healing Brush frequently in your digital image work.

I received my package a few days ago! I was so excited I dashed out to the mailbox the minute it arrived! My Santa sent me two wonderful knitting books and some granny squares with which to make a delightful mitt! Thank you so much, Santa! You're the best! -Cara PS: I cannot express how much I love the purple circles used for thumb gussets! So purty! And I can't wait to knit up that cozy mitt! Kyle Eastwood has become the first man to be in the news twice for being caught in a nudist picnic. Eastwood was spending the weekend at a nudist resort in Queensland, Australia when he received a text message from a fellow naturist asking if he wanted to join him. 'As we continued to chat, I asked if he wanted to join me,' Eastwood explained to the daily blog. Kyle Eastwood was chatting online with a naturist couple when he received a text asking if he wanted to join them for a picnic in the bush Eastwood says that while he understands that naturists can hold their own trials, he's never been with a couple before and he didn't know if he would be welcome Eastwood said that he still hadn't received a proper introduction when the couple arrived with a picnic and nudist play equipment. After plopping down on a beach towel, the couple said that they were hoping for a 'twosome' in the wilderness. Eastwood is not a complete nudist, and he felt that nudists can hold their own trials, but having never tried it, he didn't know if he would be welcomed into the kinkier activities of his new friends. Eastwood got comfortable with the naked couple when they arrived with a picnic and nudist play equipment Eastwood told the couple that while he understood that nudists could hold their own trials, he didn't know if he would be welcome in their kinkier activities The pair began to admire each other and could tell that Eastwood was getting comfortable. 'I began watching the nudist couple and I started to think what it would be like to be with a nudist couple while being naked,' he explained. 'I could see the nudist couple's excitement as they watched me watching them. I could tell that they were getting aroused as well. 'I could feel the sweat beginning to

A photocatalyst is an article that effectively decomposes or deactivates a variety of organic or inorganic pollutants present in the air. The photocatalytic processes can be used to solve the serious environmental problems such as air pollution, water pollution, soil pollution and solid waste pollution. In particular, the photocatalytic method for purifying the air can produce a large amount of water from the air to be purified, which has been widely used for purifying a polluted air source. Additionally, the photocatalytic method for purifying the air is useful to treat a waste gas containing the above-mentioned pollutants or contaminants, and can be widely used in industrial applications such as the semiconductor industry or construction fields. In the conventional photocatalytic process, generally, the photocatalytic material such as a semiconductor photocatalyst may be loaded onto a heat-resistant substrate, or may be supported on the surface of a heat-resistant substrate. Examples of the heat-resistant substrate include ceramic, metal, or glass. However, the above-mentioned conventional photocatalytic process has the following problems. First, a metal substrate is hot and toxic to humans. Thus, a method for coating the metal substrate with various coatings, such as PTFE, TiO₂, and photocatalyst, is required. The coating process is very complicated, and the coated photocatalytic material may be easily stripped off by abrasion. Further, the coated photocatalytic material may be thermally deactivated due to a high temperature. To solve the above-mentioned problems, a heat-resistant material, such as cenosphere, can be used instead of a metal substrate. The cenosphere is manufactured by converting a melted metal or glass material into a microscopic concave shape, and the cenosphere is thus defined by a plurality of substantially spherical concave shapes. The cenosphere has a significantly strong heat insulation effect because it has a high thermal conductivity. Thus, the cenosphere can avoid a reduction in temperature caused by heat transferred from a catalyst to a heat-resistant substrate or a decomposition reaction catalyst during the reaction. Further, the cenosphere is used in a certain area where the temperature is low. For instance, it may be used in a room having a low temperature.

However, the above-mentioned conventional photocatalytic process still has the following problems. First, the metal cenosphere is expensive. Thus, the metal
