Who is an Indian citizen? Who is not? Who is in India? Who is not? And so on. When this reporter asked people in the streets of Mathura, Uttar Pradesh, if they knew what it meant to be an Indian citizen, the answer was largely a resounding “NO!” “We don’t know what it means to be Indian and how one becomes an Indian,” was the response, and the way in which Mathura’s citizens asked these questions seemed to suggest that they’d rather be British than Indian. “What’s this?” “Are you Indian?” “You can’t be! You are British, aren’t you?” Outside a betting shop here, the words ‘British’ and ‘Indian’ were used interchangeably and the Indian man who asked me these questions giggled as he did a double take when he realised I was an Indian woman. Two streets away from where we were stood a man who was squatting on the ground and seemed to be guarding a bicycle. “Do you know the meaning of Indian?” I asked him. “Indian?” he laughed. “Everybody know it! If you don’t know it, then you don’t know Indian.” Then the

Many systems require periodic, as opposed to momentary, loading. For example, engine systems, such as engines used in the generation of electricity, trucks, locomotives, ships, and helicopters may load periodically, such as during and after starting, to minimize operational losses. The engine system may be designed to use a primary power source, such as a fuel, that stores electrical power during the loading of the system, and a secondary power source, such as an electrical power generator, that converts the electrical power of the primary power source into electrical power usable by the system. However, the power output of the engine system may be constrained by the rate at which the energy of the primary power source is transferred to the secondary power source. Therefore, the engine system may not be able to process the rate at which the primary power source stores electrical power at an acceptable level, and may be forced to draw energy from the primary power source at a much higher rate than the primary power source is able to provide. Further, in some engine systems, the secondary power source may be smaller than the primary power source, which may lead to the secondary power source being unable to provide the engine system with the electrical power needed to operate. As such, there is a need in the art for an energy management system that more efficiently and uniformly transfers energy from a power source to a load.

Q: How to Export From Long Dataframe to CSV File in Python I am writing a program that takes a long dataframe and exports it to a CSV. There are a few different columns that vary in length but are all continuous columns. Here is an example of what my dataframe looks like. I want to make a function that takes in dataframes and writes it into a csv file  
Desired Output: Acronym, Description, Data  
from 2016-01-01, Data from 2016-01-02 ABCD, Test, -921.00, -2272.84  
Current Approach: I can write the csv to a new file so it gives me a list of the values  
This isn't really my question per se because I want to use multiple columns but for my example I am just using 2  
def main(): data = pd.DataFrame({'Acronym': ['ABCD'],'ABC
