Grazie a tutti per il supporto, spero di avere soddisfatto mio utilizzo del sito... :) A: Quindi, potresti usare la funzione `preg_match()` per trovare la string che dici di volere comparire. `$pattern = '/Pratica Farmacologia/i'`; `if (preg_match($pattern, $domenico) === 1) { // ^^ prima del. dovresti inserire il tuo patrnge echo 'Verifica risolta negativamente'; }`

1. Field of the Invention The invention relates to liquid crystal display (LCD) technology, and more particularly, to an array substrate of an LCD and a method for patterning the array substrate.

2. Description of the Prior Art Liquid crystal display technology is widely used in electronic products such as computer, projector, mobile phone and digital camera. Since liquid crystal molecules do not generate light themselves, the light emitting from a light source to the liquid crystal display panel will have great influence on the liquid crystal molecules. Generally speaking, the liquid crystal molecules are arranged in an array so as to display images by changing the alignment state of the liquid crystal molecules. A common array substrate is made of a glass substrate, and the glass substrate has an array of thin-film transistors disposed therein. Additionally, the glass substrate further includes a color filter (CF) layer attached on a surface thereof for displaying colors. The color filter layer is, for example, disposed on a pixel array of the array substrate. Because the array substrate and the color filter layer are made of glass, and since the glass has a thermal expansion coefficient different from that of the organic material materials of a display film, the arrangement of the liquid crystal molecules of the liquid crystal display panel is not regular when it is heated by the backlight module. Thus, the display quality of the liquid crystal display panel is adversely affected. For solving the above-mentioned problems, it is an important issue to provide an array substrate of a display and a method for patterning the array substrate so as to make the arrangement of the liquid crystal molecules regular.
