. Do you have to buy Microsoft Windows 8.1? Can you use it on PC or Mac? I will give you my views and suggestions. so don't be scared to buy it. Please read my article. Windows 8.1 Professional Release Preview is now available for download with a number of new and. Buy a Volume licence, (either online, through an authorised Microsoft channel or on retail. How to Download Top Software. Software can be downloaded if it's legal and not sold against any country's laws.Q: How to insert a background image in html? Is it possible to insert a background image in an html document and be able to control its location relative to the page? For instance, I would like to set the background image to be always in the top

---

left of the page, so the page is full of content, as well as having my logo image centered in the page. A: I would just put your logo image at the bottom of the page. If you really want the logo to be in the top left of the page, you could try setting the top and left properties of the body tag.

However, that may cause the page to look out of place. Q: Check if background-image has loaded before hiding I'm trying to use javascript to hide a div when the background image is ready. I

currently have: `$(document).ready(function() { $('#menu').hide(); $('#nav').show(); $('#loader').show(); var width = $('#loader').width(); $('#loader').fadeOut(width); });`

But the background is still visible during this time.

I'd prefer not to change the above script to: `$(document).ready(function() { $('#menu').hide();`
