How to download IDM UltraEdit v17.10.0.1008 Incl Keymaker-COREQ: How to find all occurrences of a string in a file using Javascript and replace it with some other string I have a list of String that i have created from reading the contents of another file.I am reading the contents of this file line by line,trying to find out all the occurrences of the strings in that line and replacing those occurrences

with some other string.I'm currently using the following way. var str="You are a good man. I like you. You are also a good player" str=str.replace(/You /gi, 'this is a new string'); console.log(str); But its not doing what i want it to do.Please help me in doing the same.Also please suggest how i can write it in a better way. A: Use a simple RegExp. No need to get the whole line. var str="You are a good man. I like you. You are also a good player" str.replace(/You/gi, 'this is a new string'); console.log(str) The /You/gi looks for the substring "You" and a g at the end makes global search. You don't need the i flag. 1. Field of the Invention The present invention relates to a method for producing an electronic component such as a capacitor or a resistor, a circuit board produced by the method, and an electronic device including a circuit board. More particularly, the present invention relates to a method for producing an electronic component, a circuit board, an electronic device, and a method for adjusting a capacitance. 2. Description of the Related Art An electronic component such as a capacitor or a resistor is produced by forming an electroconductive layer on a dielectric layer and forming a peripheral electrode of the electroconductive layer. The dielectric layer usually contains a resin, and the peripheral electrode is formed on the surface of the dielectric

layer by using a screen printing method or a plating method. However, in the screen c6a93da74d
