

## Bluestacks 512 Ram \_\_FULL\_\_

android is an android app player based on bluestacks, a company built by former microsoft/nokia employees, the samsung-backed startup released their app player platform this week, and its a pretty exciting development for gamers everywhere. bluestacks already support more than 14 of the most popular android phones, and they can also port android games to mac, windows, linux, kindle fire, and the ipad for those who want more options. bluestacks was best known for developing an app for skype and for helping google deliver its windows phone 7-based moto x smartphone to the masses, and they started to launch android apps for other devices in 2011. bluestacks is now delivering an app player for android tablets and other devices. the bluestacks android app player is a free download that's optimized for a range of different devices running any android version, and it's designed to make it easier to test, distribute, and monetize android apps. it's easy to see why this is gaining traction. based on their previous success, bluestacks is a company that has considerable clout when it comes to the android gaming market, and through their partnership with steam, they're now offering game players an ever-expanding collection of gaming titles from one of the most popular gaming platforms around. at a launch event today bluestacks unveiled five gaming titles, and the company is promising to add more to its set soon. the key here will be whether the download model that they're using for bluestacks - a download client for windows and mac platforms that allows windows and mac gamers to access and test android games through steam - catches on with gamers. there's no shortage of concerns when it comes to android gaming and once you compare the apps in their core app catalog against a similarly defined set of gaming titles from steam, there isn't much of a surprise in how bluestacks has established itself in this market.
