
FS2004 - VIRTUALCOL - E-JETS EMBRAER VIRTUAL Free ##BEST## Download!

i am glad to see that virtualcol is still developing. the new models are impressive! i just wish that they would make better cockpit texturing but i know that it is hard when you have such a large aircraft. i have been playing with this for a couple of weeks now and it has some great features and is fun to fly. i just wish that the afterburner was a bit stronger since it is very, very effective in the air. i will definitely be purchasing this. thanks, virtualcol! in conclusion, it's about time that virtualcol released a package specifically designed for the e-190, and if they would do the same with the e-195, i would be pleased. i know that it's not going to happen, and it is a real shame, but it's for the best. i like their other planes, i do hope that they continue to develop them in the future, perhaps as add-on packs. i would have liked to see virtualcol create a package for the e-190 and the e-195. so, i hope that you will continue to support virtualcol, as i know they do a great job with the software they make. and i like their other aircraft, so we'll see what they come up with next. thank you. the new e-190 is great, it's really fun to fly. i can't wait to try the new e-195. i'm glad to see that virtualcol is still releasing new planes for fsx. i love their planes, and i'll be waiting for more. thank you virtualcol for your continued support. if you want a great fsx / p3d package for only \$15 and you want to enjoy some of the finest jets to fly, then go get virtualcols e-190 and e-195: fsx / p3d. this package has been created especially for those users who are not going to invest too much money into the product because the price is so low. what is more, this package includes some extra features that are not included in the regular package. as usual, virtualcol's models are made with the utmost attention to detail, and with the realistic cockpits, fully recreated cockpits and slightly high frame rates, this package is perfect for flying. i would like to mention that this package is made to represent the real world e-190 and e-195. but apart from that, this package has everything that you need, and the only complaint i have is that the texturing could be a bit better. the textures on the cockpit and on the exterior of the planes are very nice, and the graphics are smooth, but the textures could be a bit more detailed. apart from that, i would also mention that the cockpit is a bit of a let down, and that the controls are a bit too easy, and that i would have liked more detailed cockpits.
