## Vg-stc4000 Driver Windows 7

installing a driver program: a step-by-step guide you will need to install the file you have just downloaded. this usually involves double-clicking on the file, but you may have to specify that you want to run the file. if you want to run the file, you will see an entry at the top of the screen with the option to run the file. if you don't want to run the file, you have two other options: add to windows - this will add the file to the windows registry, so that it is always available for you to run. run - this will run the file. you will see a wizard, showing you options for whether you are running this program for the first time or if you are updating the program. at the end of the wizard, you will need to select finish, which will install the file. the file is always removed after the file is finished installing. if you want to remove the file after installation, you can do this later by double clicking on the file and choosing delete. the camera's serial number and the firmware version, which is specified in the webcam info obtained from the webcam's usb port. in general, a camera's firmware is changed to a new version of the firmware when there is any major change in the camera, and this is the reason that any new webcams cannot be used on older tvs. samsung webcams also have a feature to add a firmware version that it could be used on older tvs, but this is an optional feature that has not yet been implemented, and i'm not sure whether this is possible or not. once the device id of hid driver is found, your webcam driver is installed on the tizen. the samsung provided drivers were only compatible with tizen, and they have not provided a driver package for other operating systems. the tizen automatically detects cameras and hid devices on your pc. on startup, the tizen automatically runs the opencam ( ) or the videocapture ( ) application. 5ec8ef588b
