i would appreciate if you can give me some details about your product and the professional music productions you've recorded with it. - can you say what has been your professional experience using jbridge for live and studio? - have you used it for audio mastering? - have you had any composers using your product? - what is the difference between your product and other products on the market? - have you used any other external midi controllers with it? - what external midi controller is the best for using your product? - how do you prepare your music to be recorded and processed in your software? what are your steps? - how much does your product cost in relation to other products? - anything

that i'm not thinking about? if you have used the 32-bit version of any of the vsts listed above, you know that they are essentially one large binary file with the plugin in it. but they are one large binary file for a reason - the 64-bit versions have always had a separate file for each plugin.

this means that the data is not shared across plugins. jbridge, on the other hand, can't rely on each plugin having its own file - the data is shared across all plugins.

I love this software. I have used a 32-bit VST host for over twenty years before

needing a 64 bit host, but I never could transfer my plugins because I had no way to install VSTs for 64 bit hosts. Thanks to the jBridge creators, there is now an easy to use mechanism to do just this. I hope they continue to update the software, because this is a great plugin! I used to run a separate Cubase host for 32 bit VST plugins as part of the trick for a few years until I made the switch to the JBridge version. Now I use 64 bit for natively and also the 32 bit version for my 32 bit plugins. Also, for a long time I did not realize that there is a difference between plug-in files as 32 and 64 bit. After the new version, I am pleased to see the tagging in the 64 bit plugins is more appropriate for the 32 bit workflow. It works on Mac OS X and Windows. It is very old and probably has a lot of bugs. I am not sure if there is a Beta version available but there is an older version from which you can download it to see if it works for you.
