A: Should be import _ "fmt". Also packages should be imported via package _ instead of using the import. convention, which cannot be used for this use case. I. Field of the Invention The present invention relates generally to lithographic apparatus, and more particularly to reducing the back reflection of the illuminating radiation by varying the path of the illuminating radiation in the apparatus. II. Description of the Related Art A lithographic apparatus is a machine that applies a desired pattern onto a target portion of a substrate. Lithographic apparatus can be used, for example, in the manufacture of integrated circuits (ICs). In that circumstance, a patterning device, which is alternatively referred to as a mask or a reticle, may be used to generate a circuit pattern corresponding to an individual layer of the IC ("design layout"), and this pattern can be imaged onto a target portion (e.g., comprising part of, one or several dies) on a substrate (e.g., a silicon wafer) that has a layer of radiation-sensitive material (resist). In general, a single substrate will contain a network of adjacent target portions that are successively exposed. Known lithographic apparatus include so-called steppers, in which each target portion is irradiated by exposing an entire pattern onto the target portion in one go, and so-called scanners, in which each target portion is irradiated by scanning the pattern through the beam in a given direction (the "scanning"-direction) while synchronously scanning the substrate parallel or anti-parallel to this direction. In such a lithographic apparatus, the position of the substrate in the apparatus is determined by use of a system for determining the position of the substrate. The radiation system in the lithographic apparatus is, in a known manner, directed towards a target portion of the substrate so as to scan the pattern in the scanning direction. A radiation-sensitive resist layer is provided on the substrate and the resist layer is irradiated via the lithographic apparatus. The detection of the substrate position is traditionally made by detecting an interference pattern caused by at least a portion of the reflected illumination radiation on a mask or a substrate arranged at an interferometer plane. In this arrangement, the interference pattern is also generally referred to as diffraction pattern, and the interference pattern is for example caused by the portion of the reflected illumination radiation on the mask or on the substrate.Stanko Kosović Stanko Kosović (, born 7 August 1950) is a Bosnian-Herzegovinian politician. 5ec8ef588b
