Create virtual printers The application can be used to create virtual printers, which allow users to manage the printed output from virtually any application. Employees can use these virtual printers just as they would use any other printer. With the help of these virtual printers, administrators can ensure that printing jobs are performed faster, as they are automatically balanced to all available printers, and not sent to a single one. Furthermore, virtual printers can be shared just any regular printer. Set up multiple actions for virtual printers Print Distributor Manager comes with support for defining multiple actions for virtual printers. The program can be used to create documents, to run programs or scripts, to send emails, or to run an action under a different user account. Admins can define one or several actions for each of the created virtual printers, and can easily edit and modify these settings according to their needs. Combine multiple documents in a single one The tool includes the support for combining multiple small documents into a single one. Called Accumulate, it has been designed to hold back printing jobs and perform them at once, thus creating a single document. Users can set the application to release the collected document as soon as it has reached a certain page count or after a given timeout after the last document has been added to the print job. An intuitive tool All in all, Print Distributor Manager is an easy-to-use, powerful application that allows system admins to manage multiple printers and print jobs from a single interface, for increased efficiency. It can be used to balance operations, to create files on the computer, or to combine multiple documents to a single one. Pro Features: Create virtual printers Set up multiple actions for virtual printers Combine multiple documents into a single one Find printers Print tools Run scripts Query printers Scan for printers Sort printers Speed up printing Check battery life Sort by name Sort by status Sort by active Sort by address Sort by tags Sort by used Sort by address status Sort by usage Sort by usage status Find printers using filters Sort printers using filters Search printers Query printers with options Print to selected printer Start a printer Find printers with IP address Set

It has many features, including a powerful search engine that allows users to search for vulnerabilities by keyword, software name, filename, path, registry value, and file type. Description: RegistryCleaner is a program designed to clean and free up disk space from your computer. It removes old files from Windows or any operating system. It is particularly useful if you have a slow computer. It will not remove your files, but will clean up the disk space, without wasting your time. Description: SSH2 is a small utility for Windows XP, Windows 7, and Windows Server 2008, designed to allow you to work remotely with another computer over the Internet. You can use it to send files and programs, change settings, and more

System Requirements:

Hello there! It's been a long time since my last post, and that's a first for me. I'm going to start off this post with my current platform. It's an iMac with OS X Lion and an XBOX 360 hooked to my TV (although most of the time I am playing it on my Xbox 360). This is my setup at the moment and what I would recommend for this to work well. This setup can be done on any computer, but it would be very difficult to do on something like a laptop. X
