bGwtGson is a lightweight and easy to implement Java library designed to allow you to use the Google Web Toolkit with Gson. With the help of bGwtGson, you will be able to develop browser-based applications easier and convert Java objects to JSON. Beam-time correction of RIGS SRS-500 without averaging: a large-scale test of radiographic uniformity in medical CT. The objective of this study was to develop an algorithm to correct the beam-time dependence of the radiation output of the Roentgen Indirect X-ray System SRS-500 (SIEMENS) with a beam-time variation of 50%, without averaging, and to evaluate its performance using a variety of combinations of phantom and patient data. A beam-time correction algorithm was developed, using a validated forward model of the SRS-500 and a linear detector model for the SRS-500. The algorithm corrects the measured radiation dose from the SRS-500 for each beam and each patient using a function of the beam time and provides the recommended effective dose for each slice of the patient's image data, given that the time of acquisition of the individual images is stored in the digital data base. The effective dose values for the different beam-time intervals are weighted in accordance with the exposure at the effective time in the same way as the average exposure at a specific beam-time would be weighted. Using these recommendations, an averaged effective dose value for each slice can be calculated. The algorithm was tested by means of four different sets of phantom and patient data, each consisting of a variety of phantoms and patient cases. In addition, tests were performed with a human patient. The calculated effective doses for all cases without averaging were within 3% of the recommended values. The measured doses for the human patient were in agreement with the recommendations. The algorithm is simple to apply and easy to maintain. The quality of the correction for the different phantom cases was excellent. The beam-time correction algorithm that was developed allows accurate correction of the radiation dose for the SRS-500 with high time resolution using a single acquisition. The algorithm provides a good approximation of the effective dose for each slice of the patient's image data with a single acquisition. Sappho and the Sabines Sappho and the Sabines (, Sappho kai Òn sabain) is a mythological poem attributed to the Greek poet Sappho. It is a Greek tale. The

- Designed to be used with the Google Web Toolkit (GWT). - Support for JSON. - Support for JavaScript Array, Object and Date types. - Support for different versions of GWT. - No dependencies on GWT core. - Pure Java implementation. - More than 30 unit tests. - Pure Java Code - A "getter" method for each JSON property and a default toString() implementation. - Version 1.2 Advanced Web User Interfaces (iUI) is a set of user interface elements designed to assist developers in the creation of rich, web-enabled applications. The toolkit is lightweight, easy to use, and features easy-to-configure user interface builders, visual editors, and a server-side scripting interface. Applications can be developed with the compact, free web application framework the Android Native Client which is powered by ANE. This implementation is customized to run on various mobile devices, including Android, Windows Mobile, Blackberry and Palm OS. Shango is a lightweight, jQuery-like JavaScript library. The aim of Shango is to provide a general purpose Ajax framework for fast and simple client-side applications, specifically for AJAX web development. Android is a lightweight, cross-platform operating system for mobile devices. Android was developed to allow mobile device manufacturers to compete on the software platform instead of on the hardware. The program was released under the GNU General Public License. When it comes to using Twitter for business, make sure you are using it to your advantage. In a recent study, Twitter itself found that just 17% of its users make effective use of its services. In fact, the study showed that the average Twitter user has less than 200 followers, an audience that is small compared to Twitter's user base. With its new mobile app, Twitter is aiming to reach these users directly with its marketing efforts and turn them into users who see the value of what it has to offer. The company is making no mistakes with its mobile app, which is an intuitively designed user experience. Twitter's mobile app does not have a Home screen or separate navigation bar for finding the different parts of the app, instead, all of the features are available in one centralized screen. This provides a user experience that does not require them to take multiple steps to achieve their goals. The other great thing about the mobile app is that it appears to be very clean and simple in appearance, but it is packed

The trailhead is located on Champlain Highway, just east of the village of Duxbury, Vermont. This is the successor to an earlier trail which ran through the towns of Brattleboro and Brattleboro Junction. It is nearly identical in route and elevation gain to the original Brattleboro-Brattleboro Junction Handicap Trail. The trail is maintained by
