. A: In addition to the references cited by @Mark in the comments, another reference is Let $S(\mathbb R^n)$ be the Schwartz space of smooth rapidly decreasing functions. By definition, the Fourier transform $\hat f$ of an $S(\mathbb R^n)$ function f is the following complex valued function $$ \hat f(\xi) = \int_{\mathbb R^n} f(x) e^{ -2i\pi\xi\cdot x} dx, $$ where the integration is understood in the L^2 sense. See the introductory chapter of the book "Probability and measure", An introduction to probability theory and its applications, Volume 1, by L. C. Young, (Random Walk; Anchor Books, New York, 1966), ISBN 0-38-500559-0 (pp. 6-7) Q: How can I activate a different Wordpress theme for a page or post? I'm building a Wordpress site for the first time, and I want to use one theme for the page and one for the posts. I've activated a "site-page" theme (which is the same theme I used on the "home" page), and it shows up on the front-page of the site as it's supposed to. I also activated a "post" theme (which is the same theme I used on the post I'm trying to edit), and it shows up on the main post. Is there a way to activate that "site-page" theme for just one page? (the front page) I want to use the site-page theme for the post I'm trying to edit, but I want the front-page to use the "post" theme. I would like to be able to use both themes without having to go into the settings every time I want to do something, so that would be a definite bonus. Is this possible? Thank you! A: I would suggest you create a new child theme. Create a new folder in your theme directory Under it, create a file named functions.php with the following if (! function_exists('your_theme_name')) { function your_theme_name() {
