Instagram is one of the best social networks and it is a favorite among photographers, because not only does it allow users to share their pictures, but it also gives them the opportunity to make money on these images through its platform. The company has done some significant and smart things to improve the performance of its web-based offering, including the introduction of the new Dark Mode in its latest update. (The slightly awkward new name is "Light Mode". These days, simplicity is always a good thing. ). Apart from making some image adjustments across all of its users, the company has added a useful feature to the new Dark Mode called a Weighted Filters category, which appears in the section of the mobile app called "Looking For." This category allows users to find images that were taken with certain filters and adjust the settings accordingly to achieve better and more natural results. A good old-fashioned range search, which I believe is a good feature for beginners, is still available, as well. In November 2017, Adobe announced that it was planning to quit the hardware market and focus solely on the software market. In a sense, in September 2018, Adobe will reach that goal. The company is fundamentally changing the core way Photoshop works by transitioning it to a native, web-based application running on the GPU. This has several benefits including:

- Expanded audience

For more than 20 years, Photoshop has been loved by millions who use it to turn ideas into pictures for print and Web. But the power of Photoshop has traditionally only been available to work with on high-end desktop machines. During the Photoshop Community Day, you will see public demos of the web application running on the “native” GPU in addition to the classic Photoshop application available on a Windows desktop and Mac desktop. Beyond some of the basic features, this is the first time Photoshop technology has been used across all these platforms in a single interface. It shows that the market-leading photo editing application can work from the same code base. After the transition to web-based technology, Photoshop will continue its tradition of innovation and originality. For example, Photoshop Create and Share is a new idea enabling you to invite and work on projects with collaborators with access to a group canvas in Photoshop. You can also work from a shared URL that you can give to others. Finally, you can sign into Photoshop from devices that don't have a keyboard like your phone or tablet. Together, these capabilities will help artists work more productively. You can see for yourself how this all works in a short video released today.
