Jeb Bush has his most recent polling numbers now at 2 percent, but the former Florida governor still has at least one constituency who plans to vote for him. And according to the latest Bush poll, that group has even more weight. According to the latest Suffolk University/USA Today poll released on Sunday, Jeb Bush has a big supporter on the small screen: Millennials. "Millennials are going to like Jeb Bush," says Christopher Borick, a political science professor at Muhlenberg College. "They are, if they're not Jeb Bush fans already, fans." Millennials are, according to Borick, the largest generation in America. With their 18 to 36 years of age bracket, the Millennial voters tend to be less conservative than their older counterparts. Many are older, and therefore more politically mature, but some have only just begun to vote. And at least some of these voters like Bush. According to Borick, while the typical millennial may not support Trump, they still support candidates who support immigrants, women and, in some cases, LGBTQ rights. "People come with a set of values that they want to see in a president, and people are starting to hold politicians accountable and not only for their pronouncements but what they do," he says. "Particularly millennials, who have the most experience with government in the past generation, and that includes being in office." According to Borick, the reason millennials like Bush so much is because of what they see in the former governor. "They view him as a legitimate president. This is not someone who they just came across," says Borick. "They've seen him. They know he's been in the Bush family and his father was president." And if this generation is in play for Bush, so is the generation before millennials: the Greatest Generation. According to Borick, the former governor's strongest demographic
