With improvements to the performance of garbage collection, the ability to project images for editing in the same session and smooth video scrubbing, Photoshop CC 2019 makes it easier than ever to enhance images. "We are excited that Photoshop CC 2019 removes common barriers when it comes to editing in the browser. You no longer have to leave Photoshop to edit in a browser. For example, it can pair images of the same dog in different settings or scenarios and quickly identify which is which. And while it's not a conversation-starter that unlocks the mysteries of the dog, it does find pictures of the same subject taken from different angles and help users determine the best viewing perspective. It also watches for images posted to SharePoint and seamlessly filters out those that are duplicates. The AI-powered features keep the technology continually improving as new sets of data come through. Like the training wheels on a first-time driver, Sensei is designed to ease users into the new technologies and intelligently crop images, enhance them or identify areas that are blurry or need enhancement. **Share for Review (beta)** can improve collaboration with anyone who helps you edit photos. Create a free Master slice to share with everyone. After the others see the slice, they can make changes to it

in their own documents, then invite the Master (a link is sent in an invitation) to edit the next things, like the photo and a photo-specific layer mask. While editing an image, you can view notes and comments from others to understand what they're thinking. The Master can save his work while other people are watching and save it after their edits. The Master can share a photo of his slice changes in InDesign, Illustrator or Photoshop, and sends back a link to the original slice to make any future work much easier.
