Photoshop is a powerful application that enables you to make changes to an image for quick visual results, but, unfortunately, it is not a great application for making RAW file conversions. For this reason, artists often end up using other applications to make RAW conversions. Even when you do use Photoshop to make a RAW conversion, there are sometimes errors. Conversely, Photoshop tools that perform many functions, like Merge to HDR, tend to be very decent tools that are not available in alternatives. Right now, the only way to “expose” with HDR is to begin with a bracketed exposure series, then keep clicking “OK.” If you want to make an image look like a photograph in that camera HDR mode, you have to duplicate it and work on the duplicate. In any case, it’s much easier to make work exactly as you wanted via Photoshop, so the Lightroom catalog updates are welcome. Adobe Photoshop CC 2017 makes it easy to find and group images by import folder. When creating a folder, use the arrow keys to navigate, and Ctrl+clicking an image to add it to a folder with the Shift key held down. (If you try to just Ctrl+click, Photoshop will ask whether you would like to add an image to the current group. Select Yes.) Adobe Photoshop CC 2017 includes lots of useful new features in support of expressing your creative thoughts, including having the ability to convert to black and white, red, green or blue, as well as new blending modes. I need you to promise me that you will approach every photograph as though it were your last. That said, I plan to make every RAW file I have available for the Lightroom 6 update. Ultimately, I will look for ways to improve my workflow.
