Then, you need to locate the installation is complete, you need to locate the patch file and copy it to your computer. The patch file is usually available online, and it is used to unlock the full version of the software. Once the patch file is copied, you need to run it and then follow the instructions on the screen. Once the patching process is complete, you should have a fully functional version of Adobe Photoshop on your computer. In my first shot with the E-S1 (left panel), I'm using it with wide-angle (55mm, a little more) and I've adjusted the exposure, highlights, shadows, black points, white points, create black and white, and now the white balance. It works incredibly well. Shutting down Lightroom and switching to Photoshop via photoshop app with the E-S1 is not a big ordeal. Right panel shows now a nice, clean and bright picture, although there are still a few grey colours moving around. Gives the impression of a pretty bad post-processing with the E-S1. Let's see, using the defaults and white balance of 7054K (Auto) and white point of 12, you have a picture with clearly warm spots, which there is no possible way to get rid of. The blue channel is still quite muddy. Someone using "Eyes" or "C-B" and a more neutral white balance should see much better results.

If you have a large, desktop-based system, you can buy a graphics board that fits in the computer chassis and connects directly to the video out port on the back of the computer. Then you can install a graphics card, plug the card into the output port and run Photoshop on the card. You'd need a monitor to connect to the graphics card.

Over the past 30 years, the ideal way to represent the color of the physical world has evolved into a series of color spaces that work best for certain types of inputs or for how we intend to use them. On the web, people have been able to make adjustments to colors in their images, like adjusting the colors for something like magazine style, in the same way as they can now adjust and control how each individual pixel will look in a photo. That process is called **making color adjustments** and involves using one of 11 color adjustment types. One of these is **coloring**, which consists of a color wheel that lets you pick and reserve some color to apply to the selected area.
