I'm not sure why you'd still buy Adobe Elements after a subscription to Photoshop. After all, Photoshop Elements is pretty much a stripped-down version of the full Photoshop product. If you already own a subscription to Photoshop, however, and don't like the idea of having to pay twice (once for the subscription and once for Photoshop Elements and Lightroom), or wish to save money by purchasing a one-time licensing for Photoshop and its smaller budget brother, then Lightroom is the best option .

The ultimate Photoshop review must come with some standard disclaimers; otherwise, this is just a happy story and not a Photoshop review. The disclaimer applies to me whether or not you agree with me; I'm a professional photographer and Photoshop is my sole source of income. As such, I have to be damn good at what I do! Lightroom, on the other hand, has its own advantages. For example, if you have a lot of images, you can have presets for tons of camera types and types of events. But if you are just starting out, while Lightroom kits are available (and not expensive), you are better off getting to know the Adobe Creative Suite, where you will be doing your writing, news, drawings or whatever you want. Lightroom provides a strong visual basics app, but I think that Photoshop is more suitable for the way you want to think about and visualize things. You have to show your hand if you have a big ego like me. Sometimes, I can be really pissy when I've told people like that what I do for a living, but I don't think they ever take my advice seriously. If they do, then I am not doing my job. As a professional, I wish that people don't judge Photoshop by how they use it (or, how it forces me to use it), but I see people tweeting that they are not able to use Photoshop because it is too slow, super pricey, and doesn't "do what they need it to do". What does that say about my abilities and about our product? Next time, I will just give them the rundown on why their complaints are invalid for an expert. The thing is, if your union tells you what you can and cannot do or doesn't care enough about your job, you are usually pretty safe.
