Depending on which of the two Photoshop versions you are using, the New button in the toolbar will show up when clicked on in an active Photoshop document. The New button works across both versions of Photoshop, but it looks different in the older versions.

The Color Picker is used to select, modify, copy and move color. You can use the color picker to select any color you want to manipulate in an image. You can change its brightness, saturation, and exposure individually, or when changing the Hue, in any sequence you want. You can also copy color from one color to another, leaving the original untouched. You can also copy color across paths, copying the path color to any other selected or fill color, anywhere on the artwork.

Using the color picker is easy. All you have to do is press the "" (Open Picker) button in the top toolbar. When opened, you can select a single color, multiple colors, a range of colors, and even a selection. You can also edit the range of colors you are editing and even re-order them in any order you desire. This is very useful for creating, modifying, and or copying and pasting the exact same custom colors.

Another area we like to use is the Adjustment Panel. The Adjustment Panel is a very powerful place to edit, modify and create custom color corrections. You have complete control over the color range to apply, output colors, opacity, and contrast.

In the Adjustments Panel, you can add Layer Masks. Layer Masks control the color selections you make in one color or path. Layer Masks are very useful for this. Sometimes when we overlay different textures or color schemes onto the same artwork, we often only want in certain areas affected, not all of the artwork. By combining the other use cases of the Layer Mask, you can make some pretty impressive color corrections to any image.

With this modern update to Photoshop and more powerful editing features, we aim to empower users everywhere to better create and manage their creative work. Adobe Photoshop is one of the most powerful tool in the hands of photographers. Over the years, Adobe has added an incredible amount of features, refining and improving each of them. We are proud of the legacy that we have built, and we are excited for the new advances that Photoshop is bringing over the next several months. This is a huge endeavor for us, and we are confident that this program will continue to evolve. Our goal is to make this an experience that all of our users will love. To get Photoshop beta this Fall, you need an October 2019 version of Photoshop (CS6 on up) installed. You can use the Creative Cloud version of Photoshop, or the standalone, but at the time of this release, Creative Cloud will be the only one supported. multiple solutions to help you get the latest update and beyond. Our current plans for macOS also include an update this Fall, subject to final testing and sign-off.
