Plus, you can define and even overlay an unlimited number of Layer Styles on an image and have them blend and interact in many ways, such as as a gradient fill or an overlay. **Advanced video editing:** New in CS19 and available for all supported platforms, support for video editing is far more direct and intuitive with a redesigned timeline. Using a filter strip at the bottom of the interface, you can access the tools that professional editors and creators need, including controls, titles and a custom color migration in just seconds. **Smart Anchor (beta):** New Adobe Camera Raw (ACR) update introduced support for Smart Anchor in the beta. You'll see the Smart Anchor tool on the Correction panel in ACR. This feature extends the anchor functionality in ACR, but it only works with RAW images.
