Installing Adobe Photoshop and then cracking it is easy and simple. The first step is to download and install the Adobe Photoshop software on your computer. Then, you need to locate the installation.exe file and run it. Once the installation is complete, you need to locate the patch file and copy it to your computer. The patch file is usually available online, and it is used to unlock the full version of the software. Once the patch file is copied, you need to run it and then follow the instructions on the screen. Once the patching process is complete, you will have a fully functional version of Adobe Photoshop on your computer. To make sure that the software is running properly, you should check the version number to ensure that the crack was successful. And that's it - you have now successfully installed and cracked Adobe Photoshop!

In addition to the DNG optimization feature, Adobe just added iPad (iOS) photo support. This is a nice little addition because not all people have a desktop or laptop computer. When you add an iPad Pro, new and recent iOS photos will automatically be converted to DNG if the files are saved in that format, and that applies to RAW photos as well. That might not sound like a big deal, but it is exciting. You can choose to include or exclude mobile devices from being able to open the DNG file. The best part is that if you have a computer with a camera connected to the same Wi-Fi network, you won't need to change the settings to have the computer's camera share any photos shot with that device.

Adobe Lightroom edits JPEG files with what is sure to be a delightful user experience. You can access crop presets, rotate, flip, apply creative effects, and adjust exposure, white balance, and color to create "photo-realistic" effects. Since JPEG's are most often sent directly to print or posted online, this is a great feature. You also have the option to apply six different special effects, all with Lr presets. You'll find that there are plenty of presets for certain preferences to enhance your photos.

Obviously the not so good news for Lightroom is that the high cover version of Lightroom Prime is not available for Windows and Linux. This isn't a deal-breaker by any means, but even though Lightroom's editor has plenty of power, it still relies on its DAM (Digital Asset Management) core as the backbone of its application. I think it would have been awesome if they could've invented something similar to what Amazon has for video editors and comic book creators with their AWS. Maybe Adobe should have opened their DAM to allow for third-party apps to be used in it. Perhaps then they would have an app that all their customers would be interested in? May the DCMS and DAM users win this round, but it's still my favorite DAM for sure. For now, I'll keep downloading photos using Lightroom. Doing so is easy and fun because my photos can be accessed from anywhere and I can continue editing it. Lightroom and Photoshop are a match made in heaven, but maybe Adobe has some work to do with the Lightroom DAM if they want to maintain the trust of their customers.

All Adobe Creative Cloud applications have an in-depth teach yourself page on how to use them as long as you are signed in with your Adobe ID. Once you have registered for Adobe Creative Cloud, you will be able to download and access all your previous downloads (Adobe Photoshop, Adobe Illustrator, Adobe InDesign, Adobe Acrobat X, Adobe Muse, and Adobe XD). You will also be able to access your recent documents and images (I don't do anything with them, just haven't found a need to yet) and personal documents and files.

For this reason I believe it best to get a second computer to work on. For all you venturing out into graphics and Photoshop, never fear there is a good chance you can learn Photoshop well enough to get the job done. Software like Photoshop is very powerful, and if you "work smart and play hard" you should be able to learn the program fairly well. Pro tip: take a look at the tutorials on making custom logos as it will be helpful to learn the fundamentals necessary to make you own unique pieces.

There are a lot of tutorials out there and some of them are good, some are bad, and some are so broken down as to make the tutorials look like a step-by-step guide. If you're looking to make money, pay for the courses. But the problem with that is they rarely really prepare you to learn the program well. Web Developers have had a very long exposure to Adobe Creative Suite, so there are some very advanced courses available that are pretty decent. If you want, search the Amazon book store for tutorials or buy the course directly. I would avoid the courses on Udemy for \$39.99 as they often instruct you to purchase their products which is a pretty big no no. I don't know what they make out of us, but personally I have found some great beginner tutorials online for free. Start here: <http://learn.adobe.com/>
